IE 310: Homework 3 — Due:April 10st 23:59

Note: You need to hand in a report which contains your description of the method and output of the problem each instance (you may include screenshots in your report or write your output in a text file.) Check below for output format. Please name your folder as "Name-Surname-ID-Assignment3". Submit your folders via Moodle page until due time.

First of all, my code consist of three part: Tableau class, Simplex class, main function. Tableau class is useful to show each and final iteration with good visualization and also this class has several helpful function to apply simplex method. You can them below:

```
def change_base(self, i, j):
    def adjust_basis_or_non(self, i, j):
    def min_ratio_test(self):
```

To start simplex method, Tableau class has;

Due: Apr 10 23:59

```
def load_tableau_from_file(self, filename):
```

function and briefly does change file format to simplex format.

Simplex class has simplex function to apply fundamental rule of simplex method mainly.

```
def simplex(self):
    bnd = False
    while not self.tableau.has_solution():
        i, j = self.tableau.min_ratio_test()
        if i is None:
            bnd = True
            self.answer = "Unboundeness solution"
```

```
return
else:
    self.tableau.change_base(i, j)

if not bnd:

tmp = ""

if self.tableau.has_degenerate():

    tmp = " and degenerate"

if self.tableau.has_multiple_solutions():
    self.answer = "Multiple solution" + tmp

else:
    self.answer = "Unique Solution" + tmp
```

Due: Apr 10 23:59

In according to result of has_solution(), has_multiple_solution(), is_degenerate() and min_ratio_test(), decide output format. Output format is wrote with Tableau final according to result. At finally, main function construct object from these classes and iterate data file. Desired result is automatically generated in "output.txt".

RESULT:

Due: Apr 10 23:59
